"The system automatically logs when certain activity takes place and allows Lenders Risk Management staff to add custom comments to claims that you can see in real time, allowing you to track your claim every step of the way."

"A purpose built claim wizard walks you through each step of filing a claim"

"Control by login which team members can file claims and what type, allowing you to easily track activity by branch, state or subsidiary"

CUSTOM PLATFORM

We didn't start out with an off the shelf insurance product and make it work with VSI / LSI claims, we built one from scratch to provide real time responsive support to our lenders. Being purpose built, you'll find an easy to use claim wizard that walks through every step.

WEB SOLUTION

Utilizing the latest platform tools of IIS, Microsoft SQL server and AJAX you'll find our web based system easy to use, flexible and with claim status notes updated in real time. If you upload your documents and send payments via ACH you can have a paperless solution.

SECURE AND FLEXIBLE

Since we track each user by a unique login, we can restrict by user login what that user can do. This allows you the lender to group users by who can remit premiums by location or organization, and who can submit claims by location, claim type or organization.
